

About

Diploma Information Technology student and solo developer with a strong interest in building practical, user-focused systems using MERN stack, Nextjs, and modern backend technologies. Strong in REST API design, authentication, database architecture — from schema design to production deployment. Has hands-on experience integrating AI into real-world projects, including voice agents (VAPI AI) and AI-powered chat features. Currently expanding into cloud computing, DevOps and system design.

Education

Don Bosco College - Canlubang	Calamba City, Laguna
Diploma Program in Information Technology · GPA: 1.43	2023 – Present

Technical Skills

- **Frontend:** HTML5, CSS3, TailwindCSS, JavaScript, TypeScript, React, Next
- **Backend:** Node, Express, Next
- **Database:** MySQL, MongoDB, PostgreSQL, Redis · **BaaS:** Supabase, Firebase · **ORM:** Prisma
- **DevOps & Cloud:** Vercel, Render, Docker, Github actions, Basic understanding of AWS services— EC2 and S3.

Personal Projects

Parents Portal Management System · Tech Stack: React, Node+Express, Redis, MySQL

- Built a role-based access system with separate dashboards for Admin, Instructor, and Parent roles using JWT authentication.
- Implemented attendance tracking, grades management, subject scheduling, announcement and event posting and real-time messaging system with socket.io between parents and administrators.
- Added PDF export for grades, an interactive event calendar, and an AI assistant integrated directly into the portal.

Student Violation Tracking System · Tech Stack: React, TypeScript, TailwindCSS, Shadcn-UI, Node+Express, MongoDB

- Developed an admin dashboard to log and track student violations with severity levels (Major/Minor) and automatic violation count calculation.
- Built a search and filtering system for fast retrieval of student violation history and detailed student profiles.

AI Interview — A Job Interview Preparation Platform · Tech Stack: Next, Firebase, TailwindCSS, Vapi AI, Shadcn-UI, Google Gemini

- Integrated Vapi AI voice agents and Google Gemini to generate real-time mock interviews with instant AI-generated feedback.
- Built Firebase authentication, Zod input validation, interview dashboard, and responsive UI using TailwindCSS and Shadcn-UI.

TranSync PH — B2B SaaS Bus Operator Management System · Tech Stack: Next, TypeScript, TailwindCSS, MongoDB, Shadcn-UI, Leaflet

- Developed a B2B SaaS dashboard targeting Philippine bus operators to manage routes, schedules, terminals, and announcements through a centralized platform.
- Implemented JWT authentication stored in HttpOnly cookies, Zod input validation, and protected API routes.
- Built a public commuter map with Leaflet where anyone can search routes, view trip schedules and relevant information, and find terminals — powered by the same data operators manage in the dashboard.

Certifications

Earned certifications in programming (C++, Java, JavaScript, Python), database management (SQL), and modern web development, including Full-stack Development (HTML, CSS, JavaScript, React, Node.js, Express.js, MySQL), Next.js, TypeScript in React, Software Engineering, and Generative AI (2024–2026).
